

Subject: Has this ever happened to you?

Hey FIRSTNAME, Dave here from The Project Club. So here's what happened to me...

I was cruising along the open highway in Northern California, heading towards the coast. After over 10 hours on the road, my destination was now less than 100 miles away.

At this point, the GPS had identified a shortcut that would save 35 miles off the remaining trip.

But with every passing mile of this "shorter" route, the road was getting progressively worse.

First it narrowed to one lane, and then it turned into a rutted dirt road.

I was beginning to think I had made a mistake. That maybe I was lost.

But being a bit stubborn about my situation, I was determined to press on.

And finally the road started to get better.

I let out a long exhale. Relieved. Just ahead, the main road was in sight at last...

Have you ever felt that way, lost?

Thinking you have everything figured out. And then moments later, conditions change. Suddenly, things aren't so clear anymore. You become uncertain.

Not knowing what to do next.

Like when your planning a new project with a single board computer.

It starts out just fine. You know exactly what you want the new creation to do. You can see it working in your head.

But then you realize there are a few missing elements...

...a couple of steps in the flow of the data or the hardware you can't quite figure out. And now the completion the project is suddenly out of reach.

You're stuck.

Wouldn't it be great if there was a simple guide that had all the missing pieces?

A set of building blocks, like the pieces to a puzzle that, when properly combined, complete the picture to the project you had in mind.

The hardware elements.

And the software modules.

All available to use and reuse as needed to complete the entire project.

Now there is....

The Ultimate Guide to Single Board Computer Projects has everything you need to turn your ideas into reality.

All in one place.

No longer will you need to jump from one website to another to find out how to do things.

And some of these so called "solutions" you find online just don't work.

But not with the Ultimate Guide to Single Board Computer Projects.

All the information in this guide has been tested and proven to operate flawlessly.

Each piece is broken down into simple step by step instructions that are easy to understand.

This guide provides solutions to the most common problems:

- How to get your project on-line...
- How to connect over 50 sensors to your creation...
- Software routines for over 100 typical project needs...

Isn't this something you could really use?
